

Job Stories

Story #1

When booking a family vacation

I want all the tickets to be under one reference number

So that it's easier to keep track of

Because it will all be in one place.

Story #2

When going through a family emergency

I want to be able to book a direct flight

So that I can get there as soon as possible

Because that would probably be the fastest method of transportation.

Story #3

When viewing my roster

I want my next assignment to appear at the top

So that I know exactly when I am on duty

Because it's convenient that way.

Story #4

When searching for a flight in the admin portal

I want to be able to filter my search by the start or end destination

So that I can find the flight I am looking for

Because otherwise the page will be cluttered with irrelevant entries

Pilot Study – Planning & Consent-Gathering

This section will contain your planning of the pilot study.

Task 1

Scenario: I am booking a flight for 3 people with unique passenger details

Action: Complete the checkout form, then view all tickets in manage bookings and refund them

Success Criteria: All three tickets are refunded successfully

Target Time: 150 - 240 seconds

Linked to: Story 1

Task 2

Scenario: I want to book a direct flight from Berlin to Luton

Action: Find a direct flight from Berlin to Luton and book a seat

Success Criteria: Pilot receives confirmation email

Target Time: 60 - 90 seconds

Linked to: Story 2

Task 3

Scenario: I just logged into my staff account

Action: Check roster assignment in the staff dashboard

Success Criteria: Pilot must recite the date, time, start, and end destination of the flight

Target Time: 30 seconds

Linked to: Story 3

Task 4

Scenario: I was told to cancel a flight.

Action: Find and cancel the flight from Berlin to Luton on May 16, 2026

Success Criteria: Flight is deleted and no longer on the list of flights

Target Time: 30 - 60 seconds

Linked to: Story 4

Consent Script

“Thank you for participating in my HCI evaluation. This will take about 15 minutes. I’m testing my flight booking system, not you, so there are no right or wrong answers. Your participation is voluntary and you can stop at any time without giving a reason. Your data will be anonymous. I’ll use a code (like P1) instead of your name. I may take screenshots and notes and I’ll also remove any identifying information. Do you consent to participate?”

Participant Consent

Participant Number	Read consent script to the participant?	Date and time that consent was given:
P1	X	5/1/2026 9:29
P2	X	5/1/2026 14:01

Participant 1

Details of Participant:

Participant 1 was logged-in and used a mouse and keyboard.

Notes:

P1 had a good start, but when selecting the seats, they accidentally selected the same seat on two of the tickets. This made the payment fail in the next page, and when they went back to correct it, the error came back until they selected new seats for each passenger. When doing the second task, P1 was able to complete it smoothly by using the filters which allowed them to filter the search to only direct flight options. On the 3rd task they had to sign out and log into a provided staff account. This was done swiftly and the pilot immediately was able to find their next assigned flight. Finally, on task 4, they had to log into a test admin account and navigate to manage flights. They did this successfully and when on the page, they simply used the search filter and found the target flight quickly.

Participant 2

Details of Participant:

Participant 2 was logged-out, has high-contrast mode enabled, and used a mouse and keyboard.

Notes:

P2's first hurdle came when they searched for a flight and the result was a very bright white card where the text couldn't show because it had the same color as the background. This didn't stop them from completing the first task however. They then had to input each last name one by one to view the booking in the manage bookings page. This slowed them down a lot. For Task 2 they were unsure if the correct flight was selected due to the text not showing so they skipped it. For task 3, they logged into the provided testing account and saw that there were no flights assigned at the time. Finally, after logging into the testing admin account, they misclicked and had to navigate back to the dashboard to then go to the right page and complete the task quickly. However, they did so without using search filters, so they were lucky the target appeared on the first page of entries.

Metrics Breakdown

Task	Target Time	Mean Time	Fastest Time	Slowest Time	Target - Mean
Task 1	150 - 240	204.5	178	231	35.5
Task 2	60 - 90	N/A	48	DNF	N/A
Task 3	30	34.5	24	45	- 4.5
Task 4	30 - 60	59.5	34	85	0.5

Reflection / Initial Thoughts

- P2 couldn't complete task 2 due to UI issues making the flight details unreadable.
- P1 was logged-in, so they were able to see all the bookings at the same time and refund them faster.
- Having to input the details for each passenger and refresh after refunding a ticket in the manage-bookings page slowed down P2 by almost a whole minute compared to P1.

Findings

You will now formalise your thoughts, reflections and data gathered from your pilot study into some **findings** which should be single issues with the site which you have identified from your evidence.

Finding	Source	Observation	WCAG	Impact (1-5)	Inclusion (1-5)	Effort (1-5)	Priority (Im + In – E)
<i>When filling out passenger information, the user can select the same seat multiple times.</i>	P1 Notes	<i>P1: "Missing seat selection? I selected a seat for each ticket!"</i>	3.3.1 (A)	3	1	2	2
<i>When searching for a flight in high contrast mode, the text is the same color as the background.</i>	P2 Notes	<i>P2: "Hmmm, I can't see the text, but I hope it's the right one."</i>	3.3.2 (A) and 1.4.3 (AA)	3	5	3	5
<i>When viewing the flights in the admin portal, the flight details just appear as text on the screen without a border around them.</i>	P2 Notes	<i>P2: "Uhhh, am I on the right one? I can't tell."</i>	Focus Management (A)	3	3	2	4

Fixes To Implement

Fix 1

Finding: *When filling out passenger information, the user can select the same seat multiple times.*

Explanation:

While booking a flight with multiple tickets, it is possible to assign the same seat to multiple passengers, causing an error when trying to pay. The system caught it and prevented the pilot from moving further, but it should not be an option to begin with.

Original Code:

```
132     const matchesClass = option.getAttribute("data-class-id") === selectedClassId;  
133     option.hidden = !matchesClass;  
134     option.disabled = !matchesClass;
```

Fix:

The screenshot shows a flight booking interface. At the top, there is a dropdown menu labeled 'Select Ticket Type' with a downward arrow. Below it is another dropdown menu labeled 'First Class' with a downward arrow. Underneath that is a dropdown menu labeled 'Seat 1 - £5' with a downward arrow. This dropdown menu is open, showing a list of options. The first option is 'Random seat - free'. Below it is a list of seats from 'Seat 1 - £5' to 'Seat 11 - £5'. The first seat, 'Seat 1 - £5', is greyed out. At the bottom of the dropdown menu is another 'Random seat - free' option with a downward arrow. Below the dropdown menu is a blue button labeled 'Proceed To Payment'.

You can see that the selected seat at the top (1) is greyed out for the second one.

Added a script to enforce unique seat selection.

Final Code:

```
132     const matchesClass = option.getAttribute("data-class-id") === selectedClassId;
133     option.hidden = !matchesClass;
134     option.disabled = !matchesClass;
135     enforceUniqueSeats();
```

```
182 <script>
183 function enforceUniqueSeats() {
184     const selectedSeats = Array.from(document.querySelectorAll(".seat-select"))
185         .map(select => select.value)
186         .filter(value => value !== "");
187
188     document.querySelectorAll(".seat-select").forEach(currentSelect => {
189         const currentValue = currentSelect.value;
190
191         Array.from(currentSelect.options).forEach(option => {
192             if (option.value === "") return;
193
194             const alreadySelected =
195                 selectedSeats.includes(option.value) &&
196                 option.value !== currentValue;
197
198             option.disabled = alreadySelected || option.hidden;
199         });
200     });

Fix 3

Finding: *When viewing bookings, they are presented as a list of things on the page.*

Explanation:

Home Book **Manage** Loyalty Rewards Settings Help Admin Dashboard

Manage Bookings

Find a Booking

Ref Number Input

Last Name Input

FIND BOOKING

Your Current Bookings

Booking Reference : 2J0L9U

Name : almaraghi

From : Not assigned

To : Not assigned

Date : Not assigned

Time : Not assigned

Seat : Not assigned

Class : Not assigned

Ticket Type : Not assigned

Cancel booking and refund

You can see that the booking info is not organised well and is just text and a button.

Original Code:

```
<div>
  <h3 style="margin-top: 0;">Find a Booking</h3>
  <div></div>

  <form method="post" action="/handleBookingSearch" aria-label="Find a booking">
    <div><input class="general-input" type="text" name="ref" placeholder="Ref Number Input" aria-label="Reference number"></div>
    <div><input class="general-input" type="text" name="last" placeholder="Last Name Input" aria-label="Last name"></div>
    <div style="flex:0 0 auto;"><button type="submit">FIND BOOKING</button></div>
  </form>
</div>

<div class="booking-header">
  <strong>Booking Reference :</strong> {{ booking[0] }}
</div>

<div class="booking-body">
  <p><strong>Name :</strong> {{ booking[1] }}</p>
  <p><strong>From :</strong> {{ booking[7] }}</p>
  <p><strong>To :</strong> {{ booking[8] }}</p>
  <p><strong>Date :</strong> {{ booking[2] }}</p>
  <p><strong>Time :</strong> {{ booking[3] }}</p>
  <p><strong>Seat :</strong> {{ booking[4] }}</p>
  <p><strong>Class :</strong> {{ booking[5] }}</p>
  <p><strong>Ticket Type :</strong> {{ booking[6] }}</p>
</div>
```

Fix: Implement better UI practices using a real life example as a reference.

Final Code:

```
<div class="card" style="margin-bottom: 40px; border-top: 4px solid #005eb8; padding: 32px;">
  <div style="margin-bottom: 24px;">
    <h3 style="margin: 0 0 8px 0; font-size: 1.5rem; color: #1e293b; display: flex; align-items: center; gap: 10px;">

    </div>
  </div>
```

WCAG Checklist

Once you have made your code changes and tested the site yourself, you should work through the WCAG checklist below, recording whether your app passes or fails, with a note stating **why**.

Be honest – if you have not met a criterion, you can explain why in the next section.

Check	Criterion	Level	Pass/Fail?	Notes
Keyboard				
K1	2.1.1 All actions keyboard accessible	A	[pass/fail]	<i>Drop-down menus don't work with a keyboard</i>
K2	2.4.7 Focus visible	AA	[pass/fail]	<i>Tested tab/shift-tab through the entire webapp 3 times and added an enhanced focus option just in case</i>
K3	No keyboard traps	A	[pass/fail]	<i>Tested tab/shift-tab through the entire webapp 3 times</i>
K4	Logical tab order	A	[pass/fail]	<i>Tested tab/shift-tab through the entire webapp 3 times</i>
K5	Skip links present	AA	[pass/fail/n/a]	<i>Didn't account for it</i>
Forms				
F1	3.3.2 Labels present	A	[pass/fail]	<i>All participants understood what each option/field meant/asked for</i>

F2	3.3.1 Errors identified	A	[pass/fail]	<i>There are error messages for if a field is not filled or passport number is too short</i>
F3	4.1.2 Name/role/value	A	[pass/fail]	<i>All participants understood what each option/field meant/asked for</i>
Dynamic Content				
D1	4.1.3 Status messages	AA	[pass/fail]	<i>Status messages appear for most actions such as processing payment and payment success</i>
D2	Live regions work	AA	[pass/fail]	<i>Screen reader was not tested</i>
D3	Focus management	A	[pass/fail]	<i>In addition to keyboard focus management, when focused on a textbox, if you scroll away then type, it will refocus onto it</i>
No-JS				
V1	1.4.3 Contrast minimum	AA	[pass/fail]	<i>A white background with black, dark blue, and blue elements offer decent contrast and there is a high contrast setting just in case</i>

V2	1.4.4 Resize text	AA	[pass/fail]	<i>There is a setting to make text larger</i>
V3	1.4.11 Non-text contrast	AA	[pass/fail]	<i>Checked colour contrast ratios</i>
Semantic				
S1	1.3.1 Headings hierarchy	A	[pass/fail]	<i>There is a logical hierarchy in the webapp's headings</i>
S2	2.4.1 Bypass blocks	A	[pass/fail]	<i>When using the keyboard, the user must tab over each button</i>
S3	1.1.1 Alt text	A	[pass/fail/n/a]	<i>There is no need for alt text.</i>

Second Pilot

Participant Consent

Participant Number	Read consent script to the participant?	Date and time that consent was given:
P1	X	5/6/2026 12:58
P2	X	5/6/2026 13:12

Participant 1

Details of Participant:

Participant 1 was logged-in and used a mouse and keyboard.

Notes:

P1 started their search for a flight from the homepage immediately, but picked a day with no flights, so they kept changing the date until they found one. They then sped through inputting the passenger details and testing payment details. When it was time to refund the tickets, they did so very quickly. P1 was simply very fast and accurate, besides the small hiccup in the start when searching for the date. They even used search filters when looking for the flight in the admin portal and were able to complete all their tasks within the target time.

Participant 2

Details of Participant:

Participant 2 was logged-out, has high-contrast mode enabled, and used a mouse and keyboard.

Notes:

Same as earlier, being logged out has caused P2 to struggle with the first task. However, since the high-contrast was fixed, they were able to complete the second task this time. The results were relatively the same as the previous tests but P2 did respond better since the UI has been improved.
